

**SUGGESTED
PROCEDURES
FOR EXPORTING
BREEDING CATTLE
AND SWINE**

FOREIGN AGRICULTURAL SERVICE
UNITED STATES
DEPARTMENT OF AGRICULTURE

FAS M-274 MARCH 1977

Foreword

Exporting has stirred the imaginations of U.S. livestock producers as a means of securing new markets for their cattle, horses, sheep, and swine.

This publication, *Suggested Procedures for Exporting Breeding Cattle and Swine*, has been prepared by the Foreign Agricultural Service to assist producers in need of factual information concerning these exports.

A companion publication, *Guide for U.S. Cattle Exporters* (Agricultural Handbook No. 217), details the import/export health regulations of 73 countries as well as the breeds of cattle being imported, sources, ages, prices, and problems in exporting U.S. animals to these countries.

This publication helps the exporter prepare for the sale of his animals, and should assist him from the time of sale through delivery.

The two publications, *Suggested Procedures for Exporting Breeding Cattle and Swine* and *Guide for U.S. Cattle Exporters*, can be highly useful tools to U.S. livestock exporters.

Suggested Procedures for Exporting Breeding Cattle and Swine

By Frederick M. Lege III

Livestock and Livestock Products Division, Foreign Market Development
Foreign Agricultural Service

Preparations for Sale

U.S. breeding livestock are being exported in ever-increasing numbers to supplement and improve production of meat and milk throughout the world. This expanding market provides opportunities for cattle producers willing to invest time, money, and effort in market development.

The cattle producer considering entrance into the export market should first decide whether the gamble of additional time and effort required to find markets is a risk to be taken willingly.

There is no guarantee of success. The expenditure of time and effort could pay handsome returns—or result in a profitless venture.

The next step is to obtain a copy of the latest revision (1976) of the FAS publication, *Guide for U.S. Cattle Exporters*, and the latest FAS circulars presenting data on exports of U.S. beef, dairy, and swine breeding stock. Ascertain from these publications the export destinations of the various breeds of U.S. breeding livestock.

Selecting the Market

Beginners in export marketing of livestock probably will find it easier—and safer—to start in an established foreign market than to explore the unknown.

Select two or more countries in the same part of the world that could be potential customers. Such a selection will save time and money in making the first overseas trip. Usually, purchasing an airline ticket to the most distant of several countries in one area entitles the ticketholder to make the intermediate

stops at no additional cost, provided all proposed stops are served by the same airline.

Having selected the target countries, refer to the *Guide for U.S. Cattle Exporters* and determine the health regulations that apply to imports of cattle by those countries. In the United States, local veterinarians can point out the problems—if any—that these regulations may pose to imports of cattle by the recipient country. Note those sections of the *Guide* that list possible obstacles to importing cattle.

Next, contact the embassies of the countries of interest (see appendix I for addresses) and travel agencies to obtain detailed information. Determine the climatic and cultural changes—including possible shocks—that the exported cattle will necessarily face if a sales contract is signed.

FAS Data Sources

Export opportunity leads can be obtained without leaving home. The FAS Trade Opportunity Referral Service (TORS) disseminates trade leads gathered by U.S. Agricultural Attachés through a computerized direct mail service and a weekly trade bulletin, *Export Briefs*.

The direct mail service is for specific products. Suppliers of beef or dairy cattle or swine, for example, receive only those inquiries related to these categories.

Export Briefs covers all trade inquiries received from Attachés as well as news items on foreign trade developments.

Further information on TORS and *Export Briefs* is available from the Export Trade Services Division,

FAS, Room 5940-S, U.S. Department of Agriculture, Washington, D.C. 20250. Information on exporting U.S. livestock can be obtained from the Livestock and Livestock Products Division, FAS, Room 4919-S, U.S. Department of Agriculture, Washington, D.C. 20250.

Your Sales Presentation

Be prepared to demonstrate to the prospective buyer your awareness of conditions in his country, and be ready to document cases in the United States or abroad where the breed of cattle you want to sell has been successful under similar conditions of temperature, altitude, and rainfall.

The inclusion of such information in the buyer-seller dialog helps to encourage buyer confidence in the seller, and indicates the seller's long-term interest in the market. It is almost impossible to be overprepared on such points, because many prospective buyers have traveled extensively and are knowledgeable about the United States and the breeds of cattle that are successfully raised there and can successfully adapt to foreign conditions.

Prepare the sales presentation carefully. What have you to offer? Document the answers. Prepare a book that includes photos (professional photos, slides, or transparencies—not snapshots) of the types of animals offered for sale. Have you produced champions or sold animals that have become champions? If so, include photos and press clippings.

Your presentation should answer all questions likely to be asked by the prospective buyer. The customer should not be compelled to guess or imagine the qualities and characteristics of the cattle being offered.

Anticipating Buyer Questions

Your ability to answer buyer questions can make or break the sale. Before signing a contract to buy cattle offered, the customer will want answers to such questions as:

- What firms are prepared to transport the animals?
- How much will transportation cost?
- Is adequate insurance on the animals available at reasonable cost?
- How much will insurance cost?
- Can the total purchase price be financed?
- If so, under what terms and conditions?

The seller must be prepared to answer these and related questions fully. A lack of preparation at this point would seriously jeopardize the success of the sales effort.

U.S. Attaché Assistance

With this information assembled, write the U.S. Agricultural Attaché in the country or countries you have selected (see appendix II for addresses). These attachés, who are specialists assigned to USDA's Foreign Agricultural Service, are the official representatives of the U.S. Government for agricultural matters in the countries in which they are stationed.

State your purpose and mention the specific preparations made in anticipation of a trip. Ask for suggestions as to the best time of year for a trip, the recommended length of the stay in the country, and cooperation in making appointments at the Ministry of Agriculture (or equivalent organization) and with representatives of organizations representing cattle producers. Allow for up to a month for transmittal of your letter, and another month for a reply.

Attachés can be of great help in establishing contacts for U.S. exporters. Because of their local knowledge, they can arrange appointments with the government officials and industry representatives who can speak authoritatively on matters related to your mission.

Contact the U.S. Agricultural Attaché upon your arrival in the country or countries of your choice. By the same token, keep the Attaché informed of any change in your plans so that he may communicate these changes to the local officials who are his contacts. He uses his official position to assist you. To avoid embarrassment, he should be kept informed of any changes in the visitor's plans.

From Sale Through Delivery

Dependability of Supply

It is of paramount importance that the U.S. exporter of breeding cattle have a dependable supply of animals to sell abroad. The exporter must be

willing to commit a portion of production for overseas sales on a continuing basis. Nothing kills sales more effectively than undependable continuity of supply. The businessman who approaches export sales as a residual outlet for surplus production cannot expect to succeed in the export market.

Export Payment and Credit

Export sales are usually paid for by one of three methods: An export letter of credit opened by the foreign buyer in favor of the seller in the United States, a sight or time draft drawn directly by the seller in the United States on the buyer abroad, or open account sales.

Letters of credit offer the greatest protection to the seller. When issued in irrevocable form by either a domestic or foreign bank on behalf of a foreign buyer, a letter of credit eliminates the credit risk. It assures the seller that he will be paid when the specified shipping documents are presented to the paying bank indicated in the letter of credit, provided that all the requirements of the credit have been met.

Sight and time drafts are increasingly popular. With the sight draft, the buyer can defer payment until the foreign correspondent of the seller's bank presents the draft to him. Only after the payment is made does the buyer receive title to the goods the exporter shipped. In practice, the buyer often does not make payment and take title until the goods arrive in his country.

Sales on open account. If the buyer is well known to the seller, has a well established reputation, or represents a foreign branch or subsidiary of a U.S. firm, the seller may want to do business on an open account, or even consignment basis. Open account sales are simple and convenient, but they provide no negotiable instrument of obligation and there may be problems of collection if the buyer refuses to pay.

Commercial banks are the best source of information on export documentation and the various means of financing and insuring export sales. If your local bank does not handle export paper, it is probably a correspondent of a bank that does.

In certain situations, private financing may not be available. In such cases, exporters should contact the Export-Import Bank, a U.S. Government agency that promotes exports by guaranteeing loans made by commercial banks and by underwriting export credit insurance available through the Foreign Credit Insurance Association. Until recently the Export-Import Bank only financed breeding livestock and for periods of 3-5 years. Some young feeders and calves have received export financing for a maximum period of 1 year. For further information contact: Export-Import Bank of the United States, 811 Vermont Avenue, N.W., Washington, D.C. 20571, Tel. 202-382-8164.

Preparations for Shipment

To be able to market livestock overseas efficiently, an exporter needs certain information regarding costs, shipping requirements, and regulations on general

steps for exporting livestock by air, land, and sea, and specialized airfreight handling requirements and costs.

Exporters of breeding livestock depend heavily on air transport for overseas shipments of their animals. Not only is the travel time by air substantially less than by water, but also the stresses on livestock in transit are greatly reduced. Ocean transport is feasible only for large shipments of livestock (300-800 head) that can qualify for charter rates.

At the present time only about 5 percent of live cattle exports go by sea. This proportion conceivably could increase in the future because of rapidly rising air freight rates. Included, therefore, in appendix III are the names of air and surface lines presently equipped to handle the shipment of live cattle. The information that follows on the use of an international freight forwarder, health document requirements, and shipping and related costs applies both to sea and air transportation.

The specialized handling of animals for air shipment requires a relatively large amount of space for each pound shipped. Other requirements are controlled temperature, humidity, and ventilation and special pens, crates, or containers. Practically all livestock transported by air today go in special cargo aircraft at rates published by the International Air Transport Association and the U.S. Civil Aeronautics Board (CAB).

Ports of air and water embarkation with holding facilities are located at New York City (horses only) and Newburg, N.Y.; Richmond, Va.; Miami, Tampa, and St. Petersburg, Fla.; Houston and Brownsville, Tex.; San Francisco, Calif.; Chicago, Ill.; Moses Lake, Wash.; Helena, Mont.; and Harrisburg, Pa.

Highly specialized equipment and crews are required to load and unload the large jet cargo planes used for overseas shipping. Unless special arrangements are made, U.S. livestock can be shipped only from airports and ports that have been designated by the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture as ports of export. For this reason, livestock may have to be trucked long distances from farm to the approved port of embarkation, thus adding substantially to shipping costs.

Livestock exporters should consult APHIS to determine which airports qualify as embarkation ports. The veterinarian at the port of embarkation ultimately decides if the animals are being handled humanely and under sanitary conditions.

The services of an international freight forwarder can be helpful in shipping your animals abroad. The freight forwarder, usually based in a port city, is an independent businessman whose basic role is to see that his customer's product moves to its destination

efficiently and cheaply. He is, in effect, a travel agent concerned with movement of freight.

As you gain experience in the export trade, you may decide to dispense with the services of the freight forwarder and handle the shipping yourself. You can do it yourself from the start, of course, and many businessmen have. Others do all their exporting through forwarders. The decision is yours.

Health Documentation

Who endorses? Special documents or origin health certificates are needed for export shipments of livestock to show that the animals have been properly inspected and are healthy and free from evidence of communicable diseases. The health certificates are issued by veterinarians who have been accredited by APHIS, State-employed veterinarians, or Federal veterinarians. Such certificates must be endorsed by an APHIS veterinarian in the State of origin. His office is normally in the State capital. The endorsed certificate must accompany the livestock to the port of export. Requirements for health certification of export livestock will vary according to the regulations of designated country of import and are subject to frequent change.

Health requirements. The import requirements are usually contained in the import permit that the consignee or importer in the foreign country must obtain from animal health officials in his country. In addition, export livestock must meet the minimum export health requirements set by APHIS. These health requirements are designed to promote export trade in U.S. livestock by insuring that only healthy animals are shipped to foreign countries and that they are handled humanely.

Specific information on animal health requirements for export should be obtained from the APHIS veterinarian in the State of origin or from the APHIS Import-Export Animal and Products Staff (Federal Center Building, Hyattsville, Md. 20782; Tel. 301-436-8383). These offices can supply information on the health certifications and humane requirements that pertain to livestock exports as well as to the airports and seaports that qualify as ports of export.

Examine the required documentation carefully. Fees are charged for some documents. Properly completed documents will help the shipper avoid costly delays. Shipping agents that specialize in international trade can be hired to handle the details of documentation. Airline, shipping, and APHIS personnel can be consulted for advice on documentation.

Documents Required. Although documentation requirements change frequently and without advance notice, the following documents are usually required when livestock are exported:

- (a) *U.S. Export Declaration* (U.S. Commerce Department Form 7525-U). This form is required by the U.S. Government for any commercial shipment leaving the United States.
- (b) *Commercial Invoice*. This document is a record of transaction between the buyer and seller and must accompany the shipment. It must give all details of animal identification, including brands, birth dates, approximate weights, country of origin, description of crating, value, and gross and net amounts of money due.
- (c) *Import Permit*. The buyer must obtain this document from his government. Some countries require that it accompany the shipment.
- (d) *Insurance Certificate*. Livestock insurance is written by several hundred agents in the United States on both U.S. guarantors and Lloyd's of London. Most general insurance agents can provide information on the nearest agent qualified to write livestock policies.
- (e) *Origin Health Certificate*. This document lists the animal's individual identification number, breed, sex, age, history of veterinary inspection at origin, and all tests and vaccinations for the animal. The certificate must be endorsed by an authorized APHIS veterinarian in the State of origin.
- (f) *Certificate of Inspection of Export Animals (USDA VS Form 17-37, Mar. 1967)*. This document is completed after the animals have been loaded at the U.S. port of export. It certifies that the animals have been correctly identified, have passed the health requirements for shipment, and assures that they have been loaded for shipment under humane conditions.
- (g) Other documents sometimes required are *pro-forma invoices* and *certificates of origin*. The former, similar to the commercial invoice, is developed by the seller and sent to the buyer with the letter of credit, giving information on the price and delivery cost of the animals. Some countries require certification of the document by the chamber of commerce at or near the seller's place of business, and some countries require that this document be legalized by their consul. The latter document is for shipments to countries that, by treaty, have special duty assessments on imports from the United States.

Shipping and Related Costs

Check all shipping costs carefully. Since some costs for exporting livestock are not readily apparent, a potential exporter of livestock should prepare a detailed estimate of shipping and related costs. To obtain a proper accounting of actual expenses, the cost of the following items (if applicable) should be totaled:

1. Vaccination and health certification fees.
2. Transportation for the animals to an airport or port that is qualified to handle international cargo shipments.
3. Purchasing or renting shipping containers.
4. Ocean and air freight rates (in air cargo, include weight of crates as well as weight of animals).
5. Insurance fees.
6. Other documentation fees.
7. Import levies and taxes.
8. Shipping agent fees. (If the services of a shipping agent are used, some of the expenses may be included in his charges.)
9. Feed and handling costs at port of export.

Shipping costs can change rapidly. Some costs prevailing in January 1977:

- Western U.S. inland transportation costs were about \$1.10 per loaded mile for a tractor-trailer of 10,000 kilograms capacity capable of hauling 33-35 animals of 454 kilograms each or 90-95 calves of 180 kilograms each. Trucks must be approved and inspected by veterinarians and cleaned prior to loading, which will cost about \$15 per truck.

- Eastern U.S. inland transportation costs are about \$1.25-\$1.40 per loaded mile under the conditions stated above.

- Holding, health certificates, rejections, and death losses prior to shipment will average about \$15 or more per head.

- Insurance will cost about 25 percent of the cost-insurance-freight (c.i.f.) value of the shipment.

- Cargo airline rates change frequently. It is not possible to give exact figures for any future date. However, one firm in January 1977 quoted a price of \$68,500 for transport via DC-8 (stretch) aircraft from Chicago to Greece, and \$52,200 from Chicago to

Italy. Back hauls could reduce the charge, subject to CAB approval.

Major Markets

For many years, Mexico and Canada have been the principal U.S. export markets for beef and dairy breeding cattle. During calendar 1974 and 1975, U.S. exports of all breeding cattle to Mexico totaled 86,796 head, and those to Canada totaled 45,516 head.

U.S. exports of beef breeding cattle to other important markets during these 2 years were: Republic of South Africa, 5,038 head (but imports as of Jan. 19, 1977, temporarily prohibited); Hungary, 2,555 head; Venezuela, 1,838 head; Argentina, 1,508 head; and Guatemala, 1,043 head.

Other important markets for dairy breeding cattle during these 2 years were: Iran, 10,122 head; Hungary, 8,311 head; Republic of Korea, 4,823 head; Bulgaria, 2,839 head; and Peru, 2,423 head.

Basic Requirements

To make the export of cattle a profitable export venture, sellers and buyers must meet certain basic requirements. In the United States, sellers must have contracts with foreign importers and be equipped to assemble, prepare for shipment, and ship healthy animals of superior quality on a regular basis, and be prepared to provide followup service.

The foreign importers must have sufficient financing to cover their contractual agreements and guarantee the U.S. sellers a stable market. The importers must have sufficient investment in facilities to receive animals and properly care for them after arrival.

Be prepared to put forth the best you have to offer—both as to the product and the service behind it. If you make a sale, write the buyer and inquire as to the conditions of the cattle on arrival, whether they are adapting satisfactorily to local conditions, and whether any further service can be offered. Ask the buyer to suggest a time for a followup trip. Each succeeding trip improves the seller's acceptance and chances of success.

Appendix I

Partial List of Foreign Embassies in the United States

AFGHANISTAN

Embassy of Afghanistan
2341 Wyoming Avenue, N.W.
Washington, D.C. 20008
Tel: (202) 234-3770

ARGENTINA

Embassy of the Argentine Republic
1600 New Hampshire Avenue, N.W.
Washington, D.C. 20009
Tel: (202) 332-7100

AUSTRALIA

Embassy of Australia
1601 Massachusetts Avenue, N.W.
Washington, D.C. 20036
Tel: (202) 797-3000

AUSTRIA

Embassy of Austria
2343 Massachusetts Avenue, N.W.
Washington, D.C. 20008
Tel: (202) 483-4474

BANGLADESH

Embassy of the People's Republic of Bangladesh
2123 California Street, N.W.
Washington, D.C. 20008
Tel: (202) 737-9169

BARBADOS

Embassy of Barbados
2144 Wyoming Avenue, N.W.
Washington, D.C. 20008
Tel: (202) 387-7374

BELGIUM

Embassy of Belgium
3330 Garfield Street, N.W.
Washington, D.C. 20008
Tel: (202) 333-6900

BOLIVIA

Embassy of Bolivia
1145 19th Street, N.W., Suite 213
Washington, D.C. 20036
Tel: (202) 223-9610

BOTSWANA
